---

MafDb.ExAC.r1.0.nonTCGA.GRCh38-package

*Annotation package for minor allele frequency data from the Exome Aggregation Consortium*

---

## Description

This annotation package stores minor allele frequency (MAF) data derived from the variant set release 1.0 of the Exome Aggregation Consortium (ExAC), excluding TCGA samples. The data are exposed to the user in the form of a `GScores` object, named after the package and loaded into main memory only as different chromosomes and populations are being queried. The class definition and methods to access `GScores` objects are found in the `GenomicScores` software package. To minimize disk space and memory requirements, MAF values larger or equal than 0.1 are stored using two significant digits, while MAF values smaller than 0.1 are stored using one significant digit.

Please consult the ExAC FAQ page at <http://exac.broadinstitute.org/faq> before you use these data for your own research.

## Format

`MafDb.ExAC.r1.0.nonTCGA.GRCh38` `GScores` object containing MAF values from ExAC downloaded on March 2018 f

## Author(s)

R. Castelo
